

ASSEMBLY INFORMATION ADDING TANK GRADUATION STICKERS

The fuel tanks will be delivered graduated from January 2023

They will also be available for those who wish to stick them on old fuel tanks.
Here is the procedure to glue them correctly:

- 1) Cut the top of the transfer at the edge of the maximum fuel line
- 2) Take care to degrease the tank well with acetone before applying the stickers

- 3) Peel off the white part of the sticker, paying attention to maintain the marking elements and their glue on the transparent transfer (you can help yourself with a cutter blade)

- 4) Position a wedge along the upper part of the fuel tank, Make it protrude a few centimeters from the right side of the tank (filler cap side)

- 5) Position the transfer against the wedge, taking care that it is symmetrical all the way down

- 6) Paste! (press well on each black transfer element)
All that remains is to carefully remove the transfer
