

THOR 250/303 RADIATOR SUPPORT ATTACHMENT

It is important to attach the top of the radiator support as shown in the photos below, for the **Thor 250 / 303** and as follows:

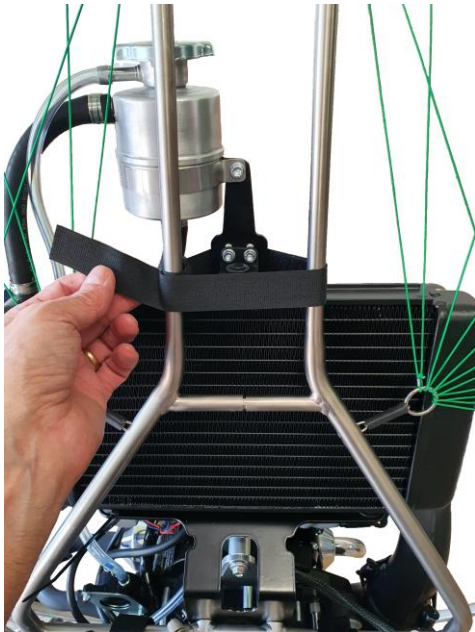

- With the Foldable cage: Use the scratch behind the pilot's head to go around the cage and the support.
- With the travel cage: Use the colson collar and pass it through black hose upon receipt and assembly of the engine

Lower part: pass the Colson collar through the net attachment ring located behind the pilot's head

Upper part: go around the guide at the top of the radiator.

This is to prevent movements of the radiator during take-off and landing races, which could reach the propeller in certain cases.

Cage Pliable / Foldable cage

Cage Voyage / Travel cage
